## **IQS, Inc.** **Launches Next Gen Enterprise Quality Management Software.**

Cleveland, Ohio (May 11, 2016) - IQS Inc., a longtime enterprise quality management software (EQMS) vendor headquartered in Cleveland, Ohio, recently launched the latest version of the company's software application built on its new proprietary platform Trubox™. IQS has released the fourth generation of its flagship EQMS to manufacturing enterprises worldwide. A new IQS logo and branding pay respect to the magnitude of advancements in the flexible and powerful solution as well as the extensible architecture of the platform.

IQS developed its next-gen, browser agnostic application with several core features in mind. Those include: rapid user on-boarding due to mobility and personalization of workspaces, built-in analytics with on-the-fly charts for instant data visibility, and extendible architecture engine for powerful IT expansion and business system integration. The Trubox platform enables people to move beyond data management into a state of actionable intelligence.

Engineered by quality professionals for quality professionals, IQS's dedication to data visibility, enterprise system integration and customer engagement culminated with this release. IQS remains faithful to its roots by ensuring organizations can rely on out-of-the-box, best-practice EQMS core tools for peace of mind and rapid deployment but the Trubox platform opens up limitless possibilities beyond this important objective. IQS anticipates that existing and new customers will exploit the power of IQS on Trubox beyond enterprise quality for key processes in adjacent disciplines like GRC, EHS, or business continuity management (BCM). Connecting and integrating IQS with other enterprise data sources is made simple with a new open plugin and integration toolset.

### **IQS built on the Trubox™ platform delivers features including:**

- Mobility enabled
- User definable workspaces
- Field level security & validation
- One-click enterprise search
- Visual embedded analytics
- Configurable, rule driven forms
- Real-time list grid updates
- Social interactivity and notifications

## **IQS built on Trubox™ allows manufacturers to streamline:**

- Audit management
- Corrective and preventive actions
- Customer complaint tracking
- Supplier quality performance
- Document management
- Production part approval processes
- Gauge calibration
- Nonconformances
- Engineering change notice management
- Statistical process control
- Failure modes and effects analysis
- First-article inspections
- Equipment maintenance
- Training management & competence tracking

This intelligently connected array of capabilities allows manufacturers to create a single source of the truth when executing continuous improvement initiatives and to satisfy quality standards, such as:

- ISO 9001
- ISO 14001
- TS 16949
- ISO 13495
- AS 9100
- FDA GxP

LNS Research, an industry leading research firm dedicated to fostering advancements in quality management, has also included IQS and its new Trubox platform in the 2016 release of their biennial report Solution Selection Guide: Enterprise Quality Management Software.

IQS developed its Trubox platform in JAVA with Web Services architecture and HTML5/CSS. Trubox also features a visual integration utility as well as supporting MSSQL, MySQL and Oracle database platforms. Trubox also supports hot deployments for updates.

The IQS application built on the Trubox platform developed by IQS, Inc. leverages EQMS in a holistic, integrated manner to ensure compliance and bolster quality and continuous improvement initiatives.

### **About IQS, Inc.**

Founded on the principles of exceptional quality management and innovative technology, IQS transforms the way the world's top manufacturers operate. For more than 28 years, IQS has been delivering market-leading quality management and compliance solutions designed by quality professionals for quality professionals. The result is an enterprise-wide solution that delivers, best-in-class data visibility with deep and open integration capabilities, and a team of experts to ensure timely deployment success and fanatical customer support.
